Philosophy behind and Pros & Cons of Various Grade Configurations

Question: What is the philosophy behind and the pros and cons of: a separate 9th grade campus; an 8th & 9th grade campus; a 9th & 10th grade campus; and an 11th & 12th grade campus?

Summary of Findings:
The most common configuration for the middle level is for grades 6-8 to be housed together. Although not a common configuration, there are some ninth grade only campuses sprinkled throughout the United States. Many of these schools were designed to address overcrowding issues either at the middle or high school while some were designed to help encourage a higher retention rate. The most common high school configuration is for grades 9-12 to be together. Schools for 11th & 12th grades seem to be mostly vocational. Although solid data on student achievement and its relationship to which configurations are thought to be the best is sparse, the research does cite areas for consideration when a district is examining various grade configurations. Cited below are the areas for general consideration; the philosophy of meeting the needs of students in the middle grades according to the National Middle School Association and for high school according to Breaking Ranks; and some pros and cons for an 8th & 9th grade campus and a 9th grade only campus.

Major Findings and Conclusions:

General considerations: Because each district is unique, their programs must meet the particular needs of their clients.
• How will the configuration affect solid educational practices?
• How will staff be recruited and hired?
• How many transitions will a student need to make while in the system?
• How will the students be eased into and through each transition?
• How will the given configuration allow for a breadth of subjects and electives to be offered?
• How will the curriculum be coordinated with the sending and receiving schools?
• How will the configuration affect extra activities such as sports and clubs?
• How will the presence or absence of older students affect the students?
• How will the configuration support the values of the district and its stakeholders?
• How long will students need to commute?
• Will the configuration be a loss of a community school? If so, how will the stakeholders respond to and accept it?
• How will the configuration affect parental and community involvement in the school?
• Is the physical facility designed to meet the needs of the students and the instructional program?
• What will the fiscal costs be to run the program?

Middle Grades Philosophy
According to the National Middle School Association in their publication of Turning Points, 2000, the philosophy for meeting the needs of every student aged 10-14 in a developmentally appropriate environment
should include:

- a challenging and stimulating curriculum that relates to the students and their lives and interests;
- different teaching and learning strategies;
- professionals who want to work with and are trained in the area of young adolescents;
- students being known well by at least one adult;
- flexible organizational structures; and
- support programs in health, wellness, and guidance.

**Breaking Ranks Philosophy**

According to the publication, *Breaking Ranks*, high schools must have personalized programs that are stimulating and rigorous. "...High school is above all else, a learning community and each school must commit itself to expecting demonstrated academic achievement for every student in accord with standards that can stand up to national scrutiny" (*Breaking Ranks: A Framework for Secondary Reform Project*).

**8th/9th Grade Configuration**

**PROS:**
- Effects size of the middle school, will give it a smaller population
- Full facility utilization

**CONS:**
- Depending on the grade level configuration of the previous school, (i.e. K-6), the 7th grade student would attend a middle school for one year, then need to transition again in the 8th grade
- For some students, travel time might be extensive
- Could take away community school

**9th Grade Only Configuration**

**PROS:**
- Alleviate some concerns from parents about the vast differences in maturity levels from 9th to 12th grades.
- There could be a strong focus on the fact that the 9th grade academic marks begin to count towards college. A whole school emphasis could be placed on study skills and transition to high school.
- High School numbers could be lowered to allow more individualized work at that level.
- Higher retention rates to stay in high school
- Ease transition into the high school setting
- Can become acquainted well with the faculty

**CONS:**
- Students would only be together for a year. That may not be enough time for them to gain an adequate comfort level in the school.
- Would there be staff who were trained in and wanted to work with students in this specific age group?
- There could be a lack of breadth of course offerings and students might need to go to the high school to pick up appropriate courses
- Would there be enough extra curricular activities (i.e. sports, clubs)?
- There would be a lack of range in age levels, how would this influence their maturity levels?
- The middle school could still be the same size
